Multiple closure of fistulae between the aortic and portacaval systems (Motion picture) U. S. Dept. of the Navy, 1957.
20 min., sd., color, 16 mm.
Summary: Technical report of a case, involving a 19-year old male who, as a result of a gunshot wound, developed independent arteriovenous fistulae between the vena cava and the aorta, and between the portal vein and the hepatic artery, resulting in marked cardiac enlargement and failure. Demonstrates a left thoracotomy approach to permit dissection of the aorta from the left by reflection, and of the spleen and abdominal viscera from the right. Shows exploration for, location of, and closure of the two fistulae.

Multiple factor inheritance (Motion picture) Calvin Co. Released by McGraw-Hill Book Co., 1960.
30 min., sd., b&w, 16 mm. Genetics series, no. 8
With study guide and workbook for genetics, by Irwin H. Herskowitz.
Correlated with Principles of genetics, by Edmund W. Sinnott, L. G. Duxon, and Theodosius Dobzhansky.
Summary: James Franklin Crow deduces and discusses discontinuous and continuous traits. He explains the influence of environment and discusses results of experiments in cases involving few pairs of genes, the results of experiments on DDT resistance in *Drosophila*, the desirability of measuring the variability of a trait, the effect of dominance in polygenic inheritance, regression, and the concept of heritability and its use in breeding.

The National Conference on Metropolitan Problems, part 2 (Motion picture) WKAR, 1956. Released by NET Film Service.

20 min., sd., b&w, 16 mm. (Urban crisis: 1956)

Summary: Presents three speakers who discuss the "fractionated" condition of city governments, the growing interest of businessmen in good city government, and some of the problems inherent in city government. A panel discusses the responsibilities of state legislatures in city government and the problems of the suburbs versus the "core city."

Non-objective space in the world of art (Motion picture) WQED. Released by NET Film Service, 1956.

30 min., sd., b&w, 16 mm. (The world of art)
 Summary: Discusses the changes in art, particularly in the field of sculpture, brought about by new materials and modern engineering. Uses photographs of bridges, fire escapes, buildings, and other modern constructions to illustrate the open-work build-up, thrust, and tensions, and to stimulate the artist's imagination toward new and dynamic art forms. Demonstrates the use of wire, sheet metal, string, plaster, and wood in non-objective space designs. Features Joseph Fitzpatrick, art supervisor of the Pittsburgh public schools.

Organotypic cultures of dorsal root ganglia (Motion picture) Association of American Medical Colleges. Made by Wynne S. Eastman Productions. Released by Association of American Medical Colleges and Abbott Laboratories, 1961.

19 min., sd., color, 16 mm. (Living human cells in culture, no. 9)
Summary: Shows the technique of setting up organ fragments under a dialysis membrane in a Rose chamber, and illustrates the in vitro behavior of cells from dorsal root ganglia of 10-day chick embryos and of newborn rats. Neurons show nuclear rotation, spherical mitochondria and the negative image of neurofibrils in the perikaryon. Shows satellite cells and associated spindle-shaped and phagocytic elements. Glensia-May-Grunwald and Bodian stains were employed. Nerve fiber outgrowth shows activity of growth cones; Schwann cells exhibit rhythmic contractile activity resembling that of oligodendroglia of the central nervous system. Describes regeneration and degeneration of myelin in vitro.

Oxidation-reduction (Motion picture) John Sutherland Productions. Released by Sutherland Educational Films, 1960.

16 min., sd., color, 16 mm.

With study guide.

Summary: Defines oxidation-reduction. Shows oxidation-reduction with oxygen and without oxygen; illustrates the various levels of oxidation or oxidation states by reactions of manganese and its compounds; demonstrates the electron transfer by separating the oxidizing and reducing agents; and shows that an electric current flows when reaction occurs. Uses the electrolysis of cupric bromide solution as an example of oxidation-reduction, and demonstrates the relative strengths of metals, including gold, as reducing agents.**Credits:** Collaborators, Norris W. Paper chromatography (Motion picture) Thorne Films.

Made by Onleigh Thorne and James B. Henderson in co-operation with Biological Sciences Curriculum Study of American Institute of Biological Sciences. Released by Biological Sciences Curriculum Study of American Institute of Biological Sciences, 1961.

14 min., sd., color, 16 mm. (Biological techniques series)

With teacher's guide.

Correlated with the high school biology textbook by the Biological Sciences Curriculum Study of American Institute of Biological Sciences.

Summary: Frank C. Erk and Harry K. Wong discuss basic principles and demonstrate techniques for analyzing dissolved mixtures of substances using paper chromatographic separations. They begin with crude materials and methods, and then introduce refinements that increase the accuracy, reliability, and versatility of this laboratory procedure. Illustrates the method of obtaining R_f values in a separation of chlorophyll extract and the separation and comparison of known to unknown amino acids.

Pastimes in young America (Motion picture) New York University, 1956. Released by NET Film Service.

30 min., sd., b&w, 16 mm.

Summary: Discusses and illustrates, with pictures and museum pieces, the various types of recreation that were built around the three basic philosophies of early Americans—amusement is sinful, games must be utilitarian, and fun for fun's sake. Tells about the origin of the different games that the colonists played and the introduction of the traveling circus and museum into America.

Photo Canada (Motion picture) Royal Canadian Air Force, Ottawa. Made and released by the National Film Board of Canada, 1948.

10 min., sd., color, 16 mm.

Revised version of the 1946 motion picture.

Summary: The story of the aerial mapping of northern Canada. Explains that from the vacant outline of 300 years ago, the map of Canada has grown into today's detailed chart, and that filling the blank spaces of the northern wilderness is especially the task of the RCAF. Shows supplies and equipment being loaded into planes, base camps being set up, surveyors fixing control points, and photo detachments working systematically back and forth over the terrain, getting pictures of seven thousand square miles of earth's face in a single day, after which RCAF laboratories develop the film.

14 min., sd., color, 16 mm. (The living science series)

With teacher's guide.

Summary: Uses telescopic photographs to visualize changes in the planets. Explains how special instruments, such as the spectroscope and photometer, help scientists gain additional information about the temperature, atmosphere, or surface of heavenly objects. Illustrates the dynamics of motion in the solar system and shows telescopes orbiting in space vehicles as a means of providing new opportunities for astronomical studies.

Plankton (Motion picture) KCTS. Released by NET Film Service, 1958.

20 min., sd., b&w, 16 mm. (Animals of the seashore)

Summary: Discusses plant and animal plankton which sustain life in the sea, pointing out that these organisms vary in size from microscopic to quite large. Uses film sequences of jellyfish to show variations in size, shape, and swimming habits. Explains that many seashore animals spend their larval or juvenile phases as members of the plankton. Shows larval crabs as they gather around a night light suspended in water from a pier. Includes an explanation of microplankton, shows them under the microscope, and considers the necessity of more knowledge and understanding of plankton. Features Dr. Dix Lee Ray of the University of Washington.

The poisoned kingdom (Motion picture) Council for a
Television Course in the Humanities for Secondary
Schools. Made and released by Encyclopedia Britannica
Films, 1959.

30 min., sd., color, 16 mm. (The humanities: Hamlet)
With teacher's manual.
Summary: The third lesson on Hamlet. Maynard Mack discusses
characterization to bring out the deeper implications in this story of
a ruined kingdom, pointing out that there is a type of poison that
permeates both the characters and kingdom in the play as illustrated
in the scenes between Polonius and Laertes, between Hamlet and the
Queen in the bedroom, between Claudius and Laertes, and between
Hamlet and Claudius in the praying scene.

Poisona, pesta, and people (Motion picture) National Film
Board of Canada, 1960.

2 motion pictures (39 min. each), sd., b&w, 16 mm.
Summary: Part 1 shows the ravages of insects—including locusts,
potato beetles, tobacco worms, and spruce budworms—and explains
that against these and many other voracious species man must con-
tinue his fight to protect his source of food. Points out that the poison
does not discriminate between harmful and beneficial creatures, and
questions whether science can find a way of controlling pests without
unattended casualties. Part 2 shows experiments conducted in labora-
tories and experimental stations to find means of controlling specific
insects, leaving harmless ones unmolested. Entomologists, agricul-
turalists, and manufacturers of chemicals discuss various aspects of
the problem.

Poland and the Soviet power: background to recent history
(Motion picture) Encyclopedia Britannica Films, 1961.
29 min., sd., b&w, 16 mm.
With teacher's guide.

Summary: A documentary record of the changes which have taken
place in Poland since 1939, including the policies of the government
and the every-day lives and spirit of the Polish people. Explores such
questions as What is Poland's relation to the Soviet Union? How do
Poles feel about the West? What do we of the Western nations have
in common with the Poles? To what extent is Poland an independent
nation? Does Poland point the way towards an understanding be-
tween East and West, or is it, as a nation, caught tragically in
between?

Print with a brayer (Motion picture) Reino Randall. Released by Bailey Films, 1958.

8 min., sd., color, 16 mm.
Summary: Demonstrates the versatility of the gelatin brayer in creative prints. Shows variations in the basic technique used to make both decorative and practical prints, including book jackets, place mats, wrapping paper, greeting cards, and fabrics. Shows experimental uses of the process in producing original designs—rolling the brayer over small objects on the paper, offsetting impressions from rough-textured materials, employing different pressures and movements, and using a variety of colors.

The problem method, pt. 2: Using information to solve the problem (Motion picture) McGraw-Hill Book Co., 1955.

Made by Sturgis-Grant Productions.
 16 min., sd., b&w, 16 mm. (Teacher education series. Set no. 2)
 Correlated with the book Student teaching, by Raleigh Schorling and Howard T. Batchelder.
Summary: After gathering information to solve the pressure-group problem, the students in a social studies class suggest possible solutions to the problem and, with the help of their teacher, develop a set of criteria against which the hypotheses can be tested. Follows the thinking process involved in testing each hypothesis and in arriving at a solution to the problem. Emphasizes the importance of the use of the problem method in preparing students for democratic living.

Project Mohole (Motion picture) Educational Testing Service, 1960.

19 min., sd., color, 16 mm. (Horizons of science, vol. 1, no. 7)
Produced in association with the National Science Foundation.
With discussion and study guide.

Summary: Explains that the earth's crust is a relatively thin skin of rock which varies in thickness, that beneath this is the mantle which composes more than 80% of the earth's mass, and that the boundary between the crust and mantle is called the Moho after the Yugoslav scientist Mohorovicic, who discovered it. Points out that no one knows much about the mysterious Moho and no one knows for certain about the mantle. Presents a report on Project Mohole's first oceanographic survey in search of a possible drilling site 200 miles north of Puerto Rico. Most of the film was shot aboard the VEMA, an oceanographic research vessel operated by Columbia University's Lamont Geological Observatory.

Credits: Executive producer, Alfred Butterfield; producer, Robert E. Dierbeck; director of photography, Robert M. Young.

Radiation: physician and patient (Motion picture) American College of Radiology, 1959. Made by Medical Radio and Television Institute.

15 min., sd., color, 16 mm.

Produced in cooperation with the U. S. Public Health Service.
Summary: Dr. Richard H. Chamberlain serves as moderator to coordinate a discussion by radiation authorities. Demonstrates the biological effects of large doses of ionizing radiation; illustrates how radiation physics is used to reduce radiation exposure; and shows, by demonstrations on patients, the clinical methods and techniques for minimizing radiation exposures in every-day X-ray examinations. Demonstrates the proper use of the fluoroscope and explains the need

to use modern X-ray apparatus, to select the proper voltage and filters, to recognize the importance of collimation of the beam, and to fast upon meticulous exposure and dark room technique. Demonstrates the methods of shielding the gonads, and emphasizes the importance of extensive knowledge and training in diagnostic radiology. Includes time-lapse photography.

The role of the green plant (photosynthesis II) (Motion picture) American Institute of Biological Sciences. Released by McGraw-Hill Book Co., 1960.
30 min., sd., color, 16 mm. (AIBS secondary school biological science film series, unit 3. Multicellular plants, no. 5)
With study guide and teacher's manual.
Summary: Describes carbon dioxide as an important factor in photosynthesis, explaining how it enters the leaf through diffusion and how water leaves the leaf as a result of transpiration. Discusses factors limiting photosynthesis, and points out that green plants are autotrophic while plants which do not contain chlorophyll are generally heterotrophic.
